### Botanical Garden

#### **Introduction and Salient features:**

The subject Botany is being taught at Graduation level. It requires different plants, and their parts to study their natural habit and habitat, morphology, anatomy, and reproduction. The Botanical Garden is landscaped in four sectors which contain various medicinal plants, spices, sacred plants, ornamental, and plants of botanical interest. The garden has drip irrigation facility provided from a well in campus. Wide range of plants are labelled with their botanical names. It contains special plant collections such as cacti and other succulent plants, herbs, and ornamental, tropical, alpine, and several exotic plants.
